Career Services Assignment
Building Your Narrative

Intro:

This assignment is pre-work for the upcoming Interview Mastery Workshop.

Instructions:

1. Add your name to the title of the doc
2. Complete each of the steps below
3. **Bring your completed assignment to the Interview Mastery Workshop** - the date and time will be provided in a separate email.

*The third-party online assessment links included here are intended to be completed with no additional cost; be aware that some versions on these sites (not linked here) may have an out-of-pocket cost charged by the site, not Coding Dojo. It is the student's choice to complete additional assessments at their own cost.

Assignment:

Step 1/4 - Values Assessment

Your values drive your decisions and personal and professional pursuits. Until you've situated them in the context of your values, it's often difficult to find the connections or "throughlines" between your past professional, educational, and personal pursuits and your new career.

Take this values assessment and list the results below

***Your four final values:**

- Continuous Learning
- Attention to Detail
- Accountability
- Discipline & Consistency

Step 2/4 - Personality Assessment

While you may or may not subscribe to the accuracy of the Myers Briggs personality assessment, it is a useful tool in helping you identify strengths that pertain directly to your personal narrative.

Take this Myers Briggs test, and then head to this site to read about your personality type: check out this personality resource*

Please share your personality type results below:

1. MY MBTI PERSONALITY TYPE (example: INTJ, Architect): ENFJ

STRENGTHS

- Fast Learner
- Attention to Detail
- Debugging Skills
- Time Management
- Team Collaboration

WEAKNESSES

- Overthinking Solutions
- Impatience
- Saying Yes Too Often
- Documentation
- Perfectionism

Step 3/4 - Type out responses to the following questions:

1. **Why did you decide to attend a tech bootcamp?**

   (How does this decision reflect your values and strengths?)

I decided to attend a tech bootcamp because I value continuous learning and hands-on growth. I wanted a structured, intensive environment that would challenge me to strengthen my problem-solving skills, improve my coding practices, and work on real-world projects. This decision reflects my commitment to self-development, discipline, and my belief that the best way to grow in tech is through practical experience and collaboration.

2. **Briefly describe your past professional pursuits, educational history and personal interests.**

   (How do they reflect your values and strengths?)

I have pursued opportunities that allowed me to grow both technically and personally, focusing on building practical skills and gaining real-world experience. My educational background provided me with a strong foundation in logical thinking and problem-solving, while my professional experiences helped me develop discipline, teamwork, and accountability. In addition to my technical interests, I enjoy exploring new technologies and working on personal projects that challenge me to learn continuously. Together, these

experiences reflect my commitment to growth, curiosity, and delivering high-quality work.

3. What's the connection between your past experiences and your new career?

(How do your past skills and passions align with your future career path?)

My past experience running a pastry shop taught me discipline, attention to detail, time management, and the importance of consistency — qualities that are equally essential in a tech career. Managing daily operations, handling customers, and solving unexpected problems helped me develop strong problem-solving skills and responsibility. Just like baking requires precision and following structured processes, programming demands logical thinking and accuracy. My passion for creating and improving things has simply shifted from crafting products in the kitchen to building solutions through code.

4. What was the moment you knew you wanted to pursue this career?

(What challenges did you overcome to get here?)

I realized I wanted to pursue this career when I started learning programming and found that I truly enjoyed it. I liked solving problems and understanding how things work. The biggest challenges were leaving my previous career, starting from zero, and facing uncertainty — but those challenges made me stronger and more determined to succeed.

5. What kind of work do you want to do upon completing the program?

(What impact do you want to make?)

Upon completing the program, I want to work on real-world software projects where I can contribute to building efficient, user-focused solutions. I aim to

grow as a developer while collaborating with a strong team and continuously improving my technical skills. The impact I want to make is creating technology that solves practical problems, improves user experiences, and adds real value to businesses and communities.

Step 4/4 - Crafting Your Elevator Pitch

Now that you've explored how your values and strengths link your past to your present, let's craft your elevator pitch. This initial version doesn't need to be perfect; your CSM will help you refine it during your 1:1 session.

What's in an elevator pitch?

- An elevator pitch is a 30-60 second pitch about who you are, what you do and where you're going. It highlights your uniqueness and is the "launchpad" for any conversation, be it in an interview or networking setting.
- A specific and personalized elevator pitch can go a long way in helping you network, will inform your online summaries, and will constitute your response to the dreaded question, "Tell me about yourself."

*Resources to Help You Create Your Pitch:

Elevator pitch - Princeton	23 Elevator Pitch Examples	What Is an Elevator Pitch?	How to Create an Elevator Pitch (With Examples)

Hi, my name is Murad, I’m a full-stack developer transitioning from running my own pastry shop. Closing my business was a deliberate decision to pursue my long-term passion for technology. Managing my shop strengthened my discipline, problem-solving skills, and ability to perform under pressure — qualities I now apply in my job.
